

Collaboration between high schools in Japan and Argentina for cosmic-ray research using CosmicWatches

Takeshi Nakamori (Yamagata U) et al.

- Tan-Q is a brand-new Japanese framework/community to support physics researches in high schools.
- We present a case in Tan-Q, collaboration btw JP and AR, to detect the CR muon excess in AR, near the SAA.
- Students observe muons by CosmicWatch, analyze data and also learn statistics to reach the conclusion.
