

Students work like astroparticle physicists with **COSMIC@WEB**

Philipp Lindenau (TU Dresden) | Carolin Schwerdt (DESY) | Michael Walter (DESY)

With Cosmic@Web school students can work like astroparticle physicists and easily analyse real experimental data from a global network of cosmic particle detectors.

The work with Cosmic@Web is introduced and its implementation in a workshop for students and teachers will be presented.

The teachers' responses show that they find Cosmic@Web suitable for in-class use. Students and teachers enjoyed the hands-on activities with Cosmic@Web and found them interesting. The students had the feeling of pursuing scientific research when working with Cosmic@Web and many students as well as teachers stated their intention to investigate research questions with Cosmic@Web independently after the workshop.
